

Water Absorber™

Water Dispersant for Fuel Oil

Water Absorber is an amazing product which captures suspended water and water particles lying at the bottom of the tank to create a colloidal dispersion of water in fuel oil. ComStar's Water Absorber immediately begins breaking up the water into fine molecules allowing it to become equal in weight to fuel oil. This reaction allows the microscopic water particles to pass through the combustion system without fouling lines, strainers or nozzles. In addition, it will allow for complete uninterrupted combustion.

- *Eliminates water and disintegrates water-based sludge*
- *Can be used in fuel oil, gasoline or kerosene*
- *Will not harm seals commonly found in heating systems*
- *Helps prevent corrosion and ice*
- *Promotes longer tank and equipment life*

Stock No. 60-335

*Available in pt., qt., 1, 5,
55, gallon sizes*
