

October 4, 2022

Valued Customers,

This is to notify you that there has been a change to the characteristics of our finished Waylube products, Sunoco Waylube 1175, 1180, 1185 and 1190. An upgrade to our additive system, which includes better wear and corrosion protection, continued superior slip-stick properties, and greater separability from coolants, has resulted in a lower odor and lighter colored product. Please see the new finished product below, left, compared to a previous production batch, right:

This change is a “rolling” change and it will be permanent. Product performance has been improved, odor is low, workpiece visibility is excellent. Should you have any questions, please do not hesitate to contact your sales rep or me.

Sincere Regards,

A handwritten signature in blue ink, appearing to read "DAE", is positioned below the closing salutation.
